

MATH152 CALCULUS II TUTORIAL – VIII

(6.05.2016)

Question 1:

Evaluate

$$(a) \int_1^3 \int_2^4 (40 - 2xy) dy dx \quad (b) \int_2^4 \int_1^3 (40 - 2xy) dx dy$$

Solution

$$\begin{aligned} \int_1^3 \int_2^4 (40 - 2xy) dy dx &= \int_1^3 \left[\int_2^4 (40 - 2xy) dy \right] dx \\ &= \int_1^3 (40y - xy^2) \Big|_{y=2}^4 dx \\ &= \int_1^3 [(160 - 16x) - (80 - 4x)] dx \\ &= \int_1^3 (80 - 12x) dx \\ &= (80x - 6x^2) \Big|_1^3 = 112 \end{aligned}$$

$$\begin{aligned} \int_2^4 \int_1^3 (40 - 2xy) dx dy &= \int_2^4 \left[\int_1^3 (40 - 2xy) dx \right] dy \\ &= \int_2^4 (40x - x^2y) \Big|_{x=1}^3 dy \\ &= \int_2^4 [(120 - 9y) - (40 - y)] dy \\ &= \int_2^4 (80 - 8y) dy \\ &= (80y - 4y^2) \Big|_2^4 = 112 \quad \blacktriangleleft \end{aligned}$$

Question 2 :

Evaluate the iterated integral.

$$\int_0^\pi \int_0^{\sin x} (1 + \cos x) dy dx$$

1. $\int_0^\pi \int_0^{\sin x} (1 + \cos x) dy dx = \int_0^\pi \left[(y + y \cos x) \Big|_0^{\sin x} \right] dx$
2. $= \int_0^\pi [\sin x + \sin x \cos x] dx$
3. $= \left[-\cos x + \frac{1}{2} \sin^2 x \right]_0^\pi$
4. $= 1 + 1$
5. $= 2$

Question 3 :

Choosing a convenient order of integration Evaluate $\iint_R ye^{xy} dA$, where $R = \{(x, y): 0 \leq x \leq 1, 0 \leq y \leq \ln 2\}$.

Solution

The iterated integral $\int_0^1 \int_0^{\ln 2} ye^{xy} dy dx$ requires first integrating ye^{xy} with respect to y , which entails integration by parts. An easier approach is to integrate first with respect to x :

$$\begin{aligned} \int_0^{\ln 2} \int_0^1 ye^{xy} dx dy &= \int_0^{\ln 2} (e^{xy}) \Big|_0^1 dy && \text{Evaluate the inner integral with respect to } x. \\ &= \int_0^{\ln 2} (e^y - 1) dy && \text{Simplify.} \\ &= (e^y - y) \Big|_0^{\ln 2} && \text{Evaluate the outer integral with respect to } y. \\ &= 1 - \ln 2 && \text{Simplify.} \end{aligned}$$

Question 4:

Use an iterated integral to find the area of the region bounded by the graphs of the equations.

$$\sqrt{x} + \sqrt{y} = 2, \quad x = 0, \quad y = 0$$

1. $\int_0^4 \int_0^{(2-\sqrt{x})^2} dy dx = \int_0^4 \left[y \right]_0^{(2-\sqrt{x})^2} dx$
2. $= \int_0^4 (4 - 4\sqrt{x} + x) dx$
3. $= \left[4x - \frac{8}{3}x\sqrt{x} + \frac{x^2}{2} \right]_0^4$
4. $= \frac{8}{3}$
5. $\int_0^4 \int_0^{(2-\sqrt{y})^2} dx dy = \frac{8}{3}$

6. Integration steps are similar to those above.

Question 5:

Use an iterated integral to find the area of the region.

2. $A = \int_{-2}^1 \int_{x+2}^{4-x^2} dy dx$

3. $= \int_{-2}^1 [y]_{x+2}^{4-x^2} dx$

4. $= \int_{-2}^1 (4 - x^2 - x - 2) dx$

5. $= \int_{-2}^1 (2 - x - x^2) dx$

6. $= \left[2x - \frac{1}{2}x^2 - \frac{1}{3}x^3 \right]_{-2}^1$

7. $= \frac{9}{2}$

8. $A = \int_0^3 \int_{-\sqrt{4-y}}^{y-2} dx dy + 2 \int_3^4 \int_0^{\sqrt{4-y}} dx dy$

9. $= \int_0^3 [x]_{-\sqrt{4-y}}^{y-2} dy + 2 \int_3^4 [x]_0^{\sqrt{4-y}} dy$

10. $= \int_0^3 (y - 2 + \sqrt{4-y}) dy + 2 \int_3^4 \sqrt{4-y} dy$

11. $= \left[\frac{1}{2}y^2 - 2y - \frac{2}{3}(4-y)^{3/2} \right]_0^3 - \left[\frac{4}{3}(4-y)^{3/2} \right]_3^4$

12. $= \frac{9}{2}$

Question 6:

Sketch the region R of integration and switch the order of integration.

$$\int_1^{10} \int_0^{\ln y} f(x, y) dx dy$$

2. $\int_1^{10} \int_0^{\ln y} f(x, y) dx dy, 0 \leq x \leq \ln y, 1 \leq y \leq 10$

3. $= \int_0^{\ln 10} \int_{e^x}^{10} f(x, y) dy dx$

Question 7:

Sketch the region R of integration and switch the order of integration.

$$\int_{-1}^1 \int_{x^2}^1 f(x, y) dy dx$$

2. $\int_{-1}^1 \int_{x^2}^1 f(x, y) dy dx, x^2 \leq y \leq 1, -1 \leq x \leq 1$

3. $= \int_0^1 \int_{-\sqrt{y}}^{\sqrt{y}} f(x, y) dx dy$

Question : 8

Use an iterated integral to find the area of the region bounded by the graphs of the equations.

$$2x - 3y = 0, \quad x + y = 5, \quad y = 0$$

$$1. \quad A = \int_0^3 \int_0^{2x/3} dy \, dx + \int_3^5 \int_0^{5-x} dy \, dx$$

$$2. \quad = \int_0^3 \left[y \right]_0^{2x/3} dx + \int_3^5 \left[y \right]_0^{5-x} dx$$

$$3. \quad = \int_0^3 \frac{2x}{3} dx + \int_3^5 (5 - x) dx$$

$$4. \quad = \left[\frac{1}{3}x^2 \right]_0^3 + \left[5x - \frac{1}{2}x^2 \right]_3^5$$

$$5. \quad = 5$$

$$6. \quad A = \int_0^2 \int_{3y/2}^{5-y} dx \, dy$$

$$7. \quad = \int_0^2 \left[x \right]_{3y/2}^{5-y} dy$$

$$8. \quad = \int_0^2 \left(5 - y - \frac{3y}{2} \right) dy$$

$$9. \quad = \int_0^2 \left(5 - \frac{5y}{2} \right) dy$$

Question 9

Area of a plane region Find the area of the region R bounded by $y = x^2$, $y = -x + 12$, and $y = 4x + 12$ (Figure 13.26).

Solution

The region R in its entirety is bounded neither above and below by two curves, nor on the left and right by two curves. However, when decomposed along the y -axis, R may be viewed as two regions R_1 and R_2 that are each bounded above and below by a pair of curves. Notice that the parabola $y = x^2$ and the line $y = -x + 12$ intersect in the first quadrant at the point $(3, 9)$, while the parabola and the line $y = 4x + 12$ intersect in the second quadrant at the point $(-2, 4)$.

To find the area of R , we integrate the function $f(x, y) = 1$ over R_1 and R_2 ; the area is

$$\begin{aligned} & \iint_{R_1} 1 \, dA + \iint_{R_2} 1 \, dA && \text{Decompose region.} \\ &= \int_{-2}^0 \int_{x^2}^{4x+12} 1 \, dy \, dx + \int_0^3 \int_{x^2}^{-x+12} 1 \, dy \, dx && \text{Convert to iterated integrals.} \\ &= \int_{-2}^0 (4x + 12 - x^2) \, dx + \int_0^3 (-x + 12 - x^2) \, dx && \text{Evaluate the inner integrals.} \\ &= \left(2x^2 + 12x - \frac{x^3}{3} \right) \Big|_{-2}^0 + \left(-\frac{x^2}{2} + 12x - \frac{x^3}{3} \right) \Big|_0^3 && \text{Evaluate the outer integrals.} \\ &= \frac{40}{3} + \frac{45}{2} = \frac{215}{6}. && \text{Simplify.} \end{aligned}$$

FIGURE 13.26

Question : 10

Use a double integral to find the area of the region R enclosed between the parabola $y = \frac{1}{2}x^2$ and the line $y = 2x$.

Solution

The region R may be treated equally well as type I (Figure 14.2.14a) or type II (Figure 14.2.14b).

Treating R as type I yields

$$\begin{aligned} \text{area of } R &= \iint_R dA = \int_0^4 \int_{x^2/2}^{2x} dy dx = \int_0^4 [y]_{y=x^2/2}^{2x} dx \\ &= \int_0^4 \left(2x - \frac{1}{2}x^2 \right) dx = \left[x^2 - \frac{x^3}{6} \right]_0^4 = \frac{16}{3} \end{aligned}$$

Treating R as type II yields

$$\begin{aligned} \text{area of } R &= \iint_R dA = \int_0^8 \int_{y/2}^{\sqrt{2y}} dx dy = \int_0^8 [x]_{x=y/2}^{\sqrt{2y}} dy \\ &= \int_0^8 \left(\sqrt{2y} - \frac{1}{2}y \right) dy = \left[\frac{2\sqrt{2}}{3} y^{3/2} - \frac{y^2}{4} \right]_0^8 = \frac{16}{3} \end{aligned}$$

Question : 11

Region bounded by two surfaces Find the volume of the solid region bounded by the paraboloids $z = x^2 + y^2$ and $z = 8 - x^2 - y^2$ (Figure 13.23).

Solution

The upper surface bounding the solid is $z = 8 - x^2 - y^2$ and the lower surface is $z = x^2 + y^2$. The two surfaces intersect along a curve C . Solving $8 - x^2 - y^2 = x^2 + y^2$, we find that $x^2 + y^2 = 4$. This circle of radius 2 is the projection of C onto the xy -plane (Figure 13.23); it is also the boundary of the region of integration

$$R = \{(x, y): -\sqrt{4 - x^2} \leq y \leq \sqrt{4 - x^2}, -2 \leq x \leq 2\}.$$

Notice that R and the solid are symmetric about the x - and y -axes. Therefore, the volume of the entire solid is four times the volume over that part of R in the first quadrant. The volume of the solid is

$$\begin{aligned} &4 \int_0^2 \int_0^{\sqrt{4-x^2}} \left(\underbrace{(8 - x^2 - y^2)}_{g(x,y)} - \underbrace{(x^2 + y^2)}_{f(x,y)} \right) dy dx \\ &= 8 \int_0^2 \int_0^{\sqrt{4-x^2}} (4 - x^2 - y^2) dy dx \quad \text{Simplify the integrand.} \end{aligned}$$

FIGURE 13.23

Question : 12

Use a double integral to find the volume of the indicated solid.

1.

2.
$$\int_0^4 \int_0^2 \frac{y}{2} dy dx = \int_0^4 \left[\frac{y^2}{4} \right]_0^2 dx$$

3.
$$= \int_0^4 dx$$

4.
$$= 4$$

Question : 13

Use a double integral to find the volume of the indicated solid.

2.
$$\int_0^2 \int_0^y (4 - x - y) dx dy = \int_0^2 \left[4x - \frac{x^2}{2} - xy \right]_0^y dy$$

3.
$$= \int_0^2 \left(4y - \frac{y^2}{2} - y^2 \right) dy$$

4.
$$= \left[2y^2 - \frac{y^3}{6} - \frac{y^3}{3} \right]_0^2$$

5.
$$= 8 - \frac{8}{6} - \frac{8}{3}$$

6.
$$= 4$$

Question : 14

Use a double integral to find the volume of the solid that is bounded above by the plane $z = 4 - x - y$ and below by the rectangle $R = [0, 1] \times [0, 2]$ (Figure 14.1.6).

Figure 14.1.6

The volume is the double integral of $z = 4 - x - y$ over R .

$$\int_0^2 \int_0^1 (4 - x - y) dx dy \quad \text{or} \quad \int_0^1 \int_0^2 (4 - x - y) dy dx$$

Using the first of these, we obtain

$$\begin{aligned} V &= \iint_R (4 - x - y) dA = \int_0^2 \int_0^1 (4 - x - y) dx dy \\ &= \int_0^2 \left[4x - \frac{x^2}{2} - xy \right]_{x=0}^1 dy = \int_0^2 \left(\frac{7}{2} - y \right) dy \\ &= \left[\frac{7}{2}y - \frac{y^2}{2} \right]_0^2 = 5 \end{aligned}$$

You can check this result by evaluating the second integral
